

Poultry Product

IB [MI] Vaccine **(Live)**

Indications

Prevention of infectious bronchitis

Directions/Dosages

Dissolve 1 vial of the vaccine (for 1,000 chickens) with 30 ml of sterile distilled water. In the case of intraocular administration, inoculate 1 drop (0.03 ml) of the dissolved vaccine using a dedicated device. In the case of spray or aerosol administration, dilute the vaccine 10 times with sterile distilled water and administer using a fine or coarse sprayer. In the case of administration with drinking water, give this vaccine added to drinking water corresponding to daily water intake.
