

Poultry Product

Newcastle Disease Vaccine (Live)

Indications

Prevention of Newcastle disease

Directions/Dosages

Dissolve 1 vial of the vaccine with 90 ml (a vial for 3,000 chickens) or 150 ml (a vial for 5,000 chickens) of sterile distilled water. In the case of intraocular/intranasal administration, inoculate 1 drop (0.03 ml) of the dissolved vaccine using a dedicated device. In the case of aerosol administration, dilute the vaccine with an appropriate volume of additional sterile distilled water and administer using a sprayer. Aerosol administration is applicable to chickens more than 28 days old. In the case of administration with drinking water, give this vaccine added to drinking water corresponding to daily water intake.
