

Poultry Product

Avian Coccidiosis Trivalent [TAM] Vaccine (Live)

Indications

Inhibition of development of avian coccidiosis caused by *Eimeria tenella*, *Eimeria acervulina*, and *Eimeria maxima*.

Directions/Dosages

Administer to broiler chicks on floor feeding in one of the following ways.

- 1) Mixing with feed (for 3-6 days old): Mix vaccine in 10-20% amount of daily food (0.02 ml of the vaccine per chick) and give it to chicks. After eating up vaccine-mixed food, give the remaining food. The vaccine should be given to chicks once.
- 2) Spraying (for 4 days old or less): Dilute 1 vial of the vaccine 5-20 times with water. Spray the diluted vaccine for 1,000 chicks packed in commercially available container. The vaccine should be given to chicks once.
