

Fish Product

Viral Nervous Necrosis **Vaccine** **(Inactivated)**

Indications

Reduction of mortality rate due to viral nervous necrosis (serotype C) in sevenband groupers and longtooth groupers

Directions/Dosages

This vaccine should be used in healthy sevenband groupers with a mean weight of 8 to 128 g and healthy longtooth groupers with a mean weight of 7 to 180 g. Administer 0.1 ml of the vaccine into fish by intraperitoneal injection. The recommended site of injection is on the abdominal midline between the tip of the abdominal fin (at the position where fin sticks to the trunk) and the base of the abdominal fin.
