

Equine Product

Equine Rhinopneumonitis Vaccine (Live)

Indications

Reduction of respiratory symptoms and restraint of abnormal labor caused by equine herpesvirus type 1

Directions/Dosages

Dissolve 1 vial of the vaccine with the included diluent. Administer 2 ml of the vaccine to horses aged 6 months or older. Give this vaccine twice at an interval of 3 weeks by intramuscular injection. For pregnant horses, give this vaccine twice at an interval of 4 weeks. The first vaccination to pregnant horses must be administered at 6 to 8 months after mating.
