

Equine and Swine Product

# Japanese Encephalitis Vaccine (Inactivated)

## Indications

Prevention of equine encephalitis and swine stillbirth caused by Japanese encephalitis virus

## Directions/Dosages

1. Horses: Administer 1 ml of the vaccine twice at an interval of approximately 1 month by subcutaneous injection.
2. Pigs: Pigs must be administered with Japanese encephalitis live vaccine (contains “at” strain). One month after vaccination with the live vaccine, administer 2 ml of the inactivated vaccine by subcutaneous injection.

In the case of pigs that had been vaccinated last year, administer 2 ml of the vaccine by subcutaneous injection, once.
